Education

Saint Louis University | St. Louis, Missouri **May 2027**
Bachelor of Science in Computer Science, Minor in Mathematics **GPA**: 3.63

- **Relevant Coursework**: Algorithms, Data Structures, Object-Oriented Software Design, Databases, Operating Systems, Computer Organization/Systems, Software Engineering

Experience

Ameren | St. Louis, Missouri **Jan 2026 - Aug 2026**
Software Engineering Co-op

- Engineered a full-stack .NET application to centralize a critical business workflow, developing a Blazor frontend and integrating an EF Core backend for robust data retrieval, eliminating ~200 hours of manual labor annually.
- Automated bulk feature modification in ArcGIS Online via Python scripting and the ArcGIS API, standardizing structural naming across nearly 3,000 enterprise records.
- Architected a comprehensive server diagram in Microsoft Visio detailing all primary transmission team applications, establishing a standardized technical reference for developer onboarding.

CHROME Lab | St. Louis, Missouri **Jan 2025 - Dec 2025**
Undergraduate Researcher

- Collaborated on a cross-disciplinary research team to advance multimodal haptic feedback systems, improving touchscreen accessibility for visually impaired individuals, doubling data collection capacity, and increasing participant outreach for BLV testing sessions.
- Developed data collection pipelines to analyze BLV interaction patterns, directly informing evidence-based UI improvements for end-user graph interactions.

Saint Louis Lambert International Airport | St. Louis, Missouri **Jun 2024 - Aug 2024**
Information Technology Intern

- Scripted an internal Python utility to automate file date modification across a shared enterprise network drive, cutting manual processing time by 20% and maintaining data consistency for all domain users.
- Administered routing hardware and monitored network switches using PowerShell across a high-traffic, dual-terminal airport infrastructure.

Projects

Multimodal Digital Graphics on Touchscreens (Android Studio, Java, Python, Gemini) **Jan 2025 - Dec 2025**

- Engineered and deployed interactive Android applications in Java/Kotlin, integrating multimodal haptic and text-to-speech (TTS) feedback systems to elevate accessibility and engagement in STEM education environments.
- Led the implementation of Google Gemini's API to automate development workflows, streamline real-time debugging, and deliver intelligent graph interpretation through AI-driven enhancements.
- Implemented pipelines for statistical modeling, signal processing, and data visualization of haptic interaction and LDV datasets, enabling evidence-based UI/UX optimization for visually impaired learners.

Predicting Global Landslide Trends (Python, Machine Learning, Pandas, Matplotlib) **Jan 2025 - May 2025**

- Designed ML pipelines using regression and classification algorithms to model hazard likelihood based on NASA's Global Landslide Catalog.
- Developed data visualizations using Matplotlib to illustrate landslide risk distributions and model outputs, delivering actionable insights to research teams to support disaster preparedness analysis.

Technical Skills

- **Programming Languages:** Java, C#, Python, Arcade, SQL, R
- **Tools and Technologies:** Android Studio, .NET, ArcGIS Online, Git, PowerShell, MySQL, Visual Studio, VS Code
- **Data Analysis/Visualization:** Matplotlib, NumPy, Pandas, SciPy, Scikit-Learn, Seaborn
